Acknowledgements

I would like to thank my supervisor, Dr Maria Kyropoulou, for helping me with this thesis.

I would also like to thank my friends and family for keeping me sane during this lock-down and overall worldwide panic. It has not been a fun time.

1 Introduction

The ability to predict changes in stock prices is extremely important to the financial world as it influences trading strategies and reduces risks in the market. The prices of stocks can be modelled as non-linear time series, which have been at the centre of attention in the finance world since the 1970s with George Box and Gwilym Jenkins popularised their Box-Jenkins method for finding the best-fit of a time series model[2].

2 Related Work

This section will introduce work related to stock market prediction, namely traditional asset pricing models and work related to the development of generative adversarial networks.

2.1 Stock Market Prediction models

ARIMA(1,1,1) data mining can predict stock prices [3]

2.2 Testing some math

Here are two equations:

$$a = b + 1 \tag{2.1}$$

$$\frac{\hbar^2}{2m}\nabla^2\Psi + V(\mathbf{r})\Psi = -i\hbar\frac{\partial\Psi}{\partial t} \tag{2.2}$$

And here is some text with some nice inline math, (x, y) wow γ so cool ρ .

2.3 Testing citations

This is Fama[1] and this is Goodfellow. This is another GAN citation.

3 Methodology

The following section provides details in the construction of the model for predicting stock prices, as well as a breakdown of the data used in the training of the network.

3.1 Dataset

The data consist of daily values for NYSE listed companies for the period January 1, 2018 to December 1, 2018. The dataset includes daily information for the Close, Open, High, Low prices and Volume of each trading day.

The data comprise of companies from various sectors listed in the New York Stock Exchange.

3.2 Prediction Model

Here is a sentence, and you can see a nice picture in Figure 3.1.

Figure 3.1: A picture of the Brayford from Google Images.

Also, a table can be found in Table 3.1. You should use a \LaTeX table generator like <https://www.tablesgenerator.com/> if you want to make your life easier.

Table 3.1: Here is a table. The caption goes above like this.

First name	Last name	Age
Bob	Bobbington	24
Joe	Bloggs	37
Billy	Bob	10

4 Results

4.1 Data set

4.2 Evaluation Metrics

4.3 Results

5 Conclusions
